THE COMBAT COM

SIGHTH AIR FORCE

OVERVIEW

- What We Do
- DoDIIS C&A Guide
- Joint DoDIIS
- The MSRTM
- Test Procedures
- Test Reports
- Testing Concerns
- Questions

What We Do

Securit

We perform security certification testing in accordance with the Director of Central Intelligence Directive (DCID) 6/3 on Special Compartmented Information (SCI) Intelligence Mission Applications (IMAs) that are assigned to the AF DoDIIS Executive Agent (DExA) by way of a *comprehensive* assessment of technical and non-technical security features.

Service Certifying Organization

DoDIIS Certification and Accreditation Guide paragraph 2.4 states that the SCO will:

- Ensure each system under consideration meets all relevant security requirements for system operation specified in DCID 6/3
- Provide security technical and policy guidance to requesting parties
- Perform security testing and evaluations on new and modified Information Systems
- Grant IATO for Information Systems pending final decision by the DAA based upon favorable results from security testing

JDCSISSS

- Documentation review process:
 - ■JDCSISSS paragraph 2.3.4.1

Time Line for Certification Activities outlines the 90 day period for Security documentation

■ SSAA 90 days from Beta I

SRTM 60 days from Beta I

■ Test Procedures 60 days from Beta I

These documents can be a show stopper.

The Master SRTM

Master Security Requirements Traceability Matrix listed in the DoDIIS C&A Guide is a cut and paste document.

- Protection Level, Integrity and Availability (H,M or B) is chosen and all other category requirements are deleted
- Controlled Interface is left in if it is applicable
- All other security requirements are left in
- Validation determination must be decided
 - I = Inspection (i.e. external markings)
 - A = Analysis (i.e. Backup procedures)
 - T = Test (i.e. log on/off, auditing etc.)
 - D = Demonstration (i.e. maintenance procedures)

This forms the basis for everything we do!!

Test Procedures

Test procedures are developed for <u>all</u> SRTM requirements that indicate validation markings of "T"

- Test procedures should be scenario-based encompassing all relative security requirements
 - I&A testing will show all I&A (log on/off), JDCSISSS (lock out & password), and AUDIT (session control) requirements.
- Some tests are done multiple times since it requires the same functions in order to get deeper into the application

If a test can be done, then it should be done.

Security Test Reports

BETA I

- Accomplish ST&E and route test report recommendations to PMO with cc to DMB, SYS-4 and DExA.
- Any Cat I or II findings will require close-out actions before any recommendation to proceed to Beta II is given
 - Could possibly effect Beta II timeline

BETA II

- Same as Beta I above. Recommendation to Field will be given when there are no Category I or II findings
- Beta II Test site will get an IATO if it <u>really is</u> an operational site and there are no significant Site-related findings

Test Environment

Concerns

- Test sponsor should be available at the beginning of each day to ensure security clearances are available for SCIF entry
- A Systems Administrator(s) to properly configure and administer the test
 - have full rights to the network
 - needs to be available during the entire test time frame
 - have a flexible schedule and be dedicated for our use
- Test location(s) should provide adequate space and equipment for all testers and support staff to conduct business
- Priority should be given over day-to-day operations
- Test site and PMO should have better communications for a successful test to be conducted

SUCCESS = COMMUNICATION = SUCCESS
